

- **Name- A visit to an enchantment forest**
- Nature- Board game
- Nature of participation- Individual (2-3 children)
- Requirements- Markers (Buttons, pen caps), Die, and game board.
- Specific Objectives-

Learners solve division problems and even estimate the answer of the problems by comparing the mentioned quotients.

- Description-

How to Play:

- 1) The first player throws the die, and then moves that number of spaces. You should count the “Start” square.
- 2) Land on a blue sum square and you don’t have to do anything until your next turn. If you land on a division problem square, find the quotient and move your marker to the square where the quotient appears. If you land on a square with words, do what it says.
- 3) The first person to get to the end wins!

(The game board is given on the next page.)
